**Subject:** CES - Gary Moore to travel to Houston to Determine Site Status due to Flooding

The CES site is experiencing flooding conditions which will require OSC Moore to mobilize to the site to determine what actions can be taken to minimize off site impacts. There is about 1 foot of free board on the southern dike before it overflows into the neighborhood. OSC Moore anticipates activating the ERRS Contractor to skim any residual materials on the water and to possibly treat stormwater through activated carbon and release to storm drains if necessary. Additional rain is expected September 2, 2014.
